CS544: Natural Language Processing

January 11, 2011

Zornitsa Kozareva USC/ISI Marina del Rey, CA kozareva@isi.edu www.isi.edu/~kozareva

The Dream

- · It would be great if machines could
 - Process our emails
 - Translate languages accurately
 - Help us manage, summarize, and aggregate information
 - Understand phone conversation
 - Talk to us / listen to us
- But they cannot:
 - Language is complex, ambiguous, flexible, and subtle
 - Good solutions need linguistics and machine learning knowledge

What is NLP?

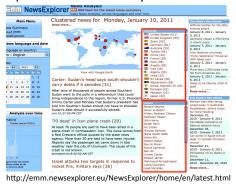

- Goal: intelligent processing of human language
 - Not just string and keyword matching
- End systems we want to build:
 - Less ambitious: spelling correction, name entity extractors
 - Ambitious: machine translation, information extraction, question answering, summarization ...

Information Extraction

- · Goal: build database entries from unstructured text
- Simple Task: Named Entity Extraction

Information Extraction

- · Goal: build database entries from unstructured text
- · Advanced: Multi-sentence template extraction

A <u>bomb</u> went off this morning near a <u>power tower</u> in <u>San Salvador</u> leaving a large part of the city without energy, but <u>no casualties</u> have been reported. According to unofficial sources, the bomb-allegedly detonated by <u>urban guerrilla commandos blew up</u> a power tower in the north western part of San Salvador at 0650.

Incident type: bombing
Date: March 11, 2010
Location: San Salvador (city)
Perpetrator: urban guerrilla commandos

Physical target: power tower
Effect on physical target: destroyed
Effect on human target: no injury or death

Instrument: bomb

Information Retrieval

- Given a huge collection of text and a query
- · Goal: find documents that are relevant to the query

| <u> </u> | <u> </u> | |
|----------|----------|--|
| | | |

Question Answering

 Find answers to general comprehension questions in a document collection

29,029 ft

The elevation of was first determined by an Indian survey in 1955, made closer to the mountain, also using theodolites. It was subsequently reaffirmed by a 1975 Chinese measurement. In both cases the stow cap, not the nock head, was measured. In May 1999 and American Everset Expedition, directed by Bradford Washbum, anchored a GPS unit into the highest bedrock. A rock head elevation of \$4,800 m (2038) \$31, and a souwhee elevation in (31) higher, were obtained with this device. Although that not been officially recognized by Nepal, this agrees elevation in (31) higher, were obtained with device. Although that not been officially recognized by Nepal, this gare is widely quoted. Good uncertainty casts doubt upon the accuracy claimed by both the 1999 and 2005 surveys. Text from Mixpleal (Mount Devest Measurement).

noweys, externor warginous about a reversion seasurement)

More recently, the mountain has been found to be 8,848 m of 20,205 feet) high, although there is some variation in the measurements.

The mountain K2 comes in second at 8,611 m (28,251 ft) high. On May 22,2005, the People's Republic of China's Everest Expedition

Than ascended to the top of the mountain. After several mountain complicated measurement and calculation, on October 9,005, the

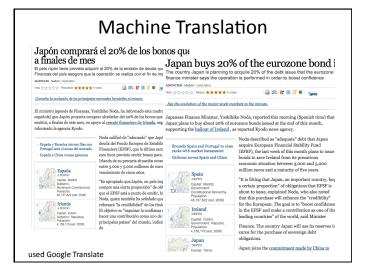

PRCS State Bureaus of Surveying and Mapping officially amounced the height of Everest as 8,944.45 m a 0.21 m (29)17.16 a 0.05 m).

The yellamed it is waste mount accurate measurement to date. But his new height is based on the seating highest point of rock and not on the stow and ice that is no top of that rock on the summai, so, in teeping with the practice used on Mort Blanc and Khan

and the stown and See that six on top of that rock on the summai, so, in teeping with the practice used on Mort Blanc and Khan

contained the stown and the story of the stown of

Speech Processing

• Automatic Speech Recognition

"will you move the clinic there?"

• Performance: 5% for dictation, 50%+TV

Linguistics Levels of Analysis

- Phonology: sounds / letters / pronunciation
- Morphology: construction of words
- Syntax: structural relationships between words
- Semantics: meaning of strings (words, phrases)
- Discourse: relationships across different sentences
- Pragmatics: how we use language to communicate
- World Knowledge: facts about the world, common sense

MORPHOLOGY

| - | | |
|---|--|--|
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |

| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| - | | |
| | | |
| | | |

| Morphological Analysis Morphology studies the internal structure of words A morpheme is the smallest linguistic unit that has semantic meaning (Wikipedia) Morphological Analysis is the task of segmenting a word into its morphemes carried => carry + ed (past tense) disconnect => dis (not) + connect Challenging for morphologically rich languages like Finish and Turkish | |
|---|--|
| SYNTACTIC TASKS | |
| Part-of-Speech Tagging (POS) | |
| Annotate each word in a sentence with a part-of- speech tag | |
| I ate the spaghetti with meatballs. Pro V Det N Prep N | |
| Useful for syntactic parsing and word sense disambiguation | |
| English POS tagging 95% accurate | |

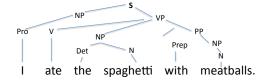

Phrase Chunking

• Find all non-recursive noun phrases (NPs) and verb phrases (VPs) in a sentence.

[NP I] [VP ate] [NP the spaghetti] [PP with] [NP meatballs] .

Syntactic Parsing

• Produce syntactic parse tree of a sentence

• Help figuring out questions like: Who did what and when?

More issues in Syntax

• Prepositional Attachment
"I saw the man with the telescope"

Syntax does not tell us much about meaning

| 7 | |
|--|--|
| | |
| | |
| | |
| | |
| | |
| SEMANTIC TASKS | |
| | |
| | |
| | |
| | |
| | |
| Word Sense Disambiguation | |
| Understand language! How? | |
| MAT MOPPHIED IN THE THAT THAT THAT THAT THAT THAT THAT | |
| | |
| I walked to the <i>bank</i> of the river. | |
| to get money. | |
| Useful for machine translation, information | |
| retrieval | |
| | |
| | |
| | |
| | |
| How to learn the meaning of words? | |
| From dictionaries, lexical repository like WordNet | |
| bank sloping land, especially the slope beside a body of water ex. "they pulled the canoe up on the bank" | |
| bank – a financial institution that accepts deposits and channels the money into lending activities | |
| ex. "he cashed a check at the bank" | |
| Automatically from the Web | |
| | |
| | |

| Semantic Role Labeling | |
|---|--|
| For each clause, determine the semantic role played by each noun phrase that is an argument | |
| to the verb | |
| agent patient source destination | |
| John drove Mary from LA to San Diego. | |
| | |
| | |
| | |
| | |
| | |
| Textual Entailment | |
| Determine whether one natural language | |
| sentence entails another | |
| The glass is half empty. | |
| The glass is <u>half full</u> . | |
| Google <u>bought</u> Youtube. Google <u>acquired</u> Youtube. | |
| doogle <u>acquired</u> foutube. | |
| | |
| | |

| | |
| | |
| | |
| | |
| DISCOURSE, PRAGMATICS AND | |
| WORLD KNOWLEDGE | |
| | |
| | |

| Anaphora Resolution | |
|--|---|
| Determine which phrases in a document refer to the same entity | |
| | |
| " <u>George</u> woke up. <u>He</u> went to the kitchen." " Peter put the <u>carrot</u> on the <u>plate</u> and ate <u>it</u> ." | |
| · — — - | |
| | |
| | |
| | |
| | |
| | 1 |
| Pragmatics | |
| Studies how language is used to accomplish goals | |
| What can we conclude from the following sentences? | |
| "Could you please pass me the salt?" "I am afraid I cannot do this" | |
| | |
| | |
| | |
| | |
| | |
| | |
| World Knowledge | |
| C | |
| "George woke up. He went to the bathroom and started shaving. He took the car key and left." | |
| | |
| | |
| | |
| | |
| | |

Course Work

- · Recommended Readings:
 - James Allen. Natural Language Understanding (2nd ed), Addison Wesley, 1994.
 - Christopher Manning and Hinrich Schütze.
 Foundations of Statistical Natural Language Processing, MIT Press, 1999.
 - Daniel Jurafsky and James Martin. <u>Speech and Language Processing</u>, 2nd edi., Prentice Hall, 2008.
- Assignments:
 - 3 coding assignments
 - late submissions will not be accepted
 - brief 1-2 paged description
 - power point presentation
 - 1 final project
